

Veneer Press

**PPE
Required**

Material Restrictions

- Only **flat panels** may be pressed in this machine
- Maximum panel size 2440mm x 1220mm

Machine Use

- During the positioning of panels in the press, use protective gloves, as the press platens reach high temperatures
- The operations of loading and unloading of the material must be effected only when the platens are lodged in their home positions
- All manoeuvres during the closing of the press are **prohibited** due to the possibility of crush injuries
- When a suitable number of panels are not available, panels of the same thickness **MUST** be used to prevent deformation of the platens
- A sheet of MDF and plastic should be placed above and below the panel being pressed to minimize the risk of damage to the platens
- **ARRANGE THE PANELS IN THE PRESS IN SUCH A WAY AS TO INVOLVE ALL SIX THRUST PISTONS, DO NOT LEAVE ANY THRUSTS WITHOUT A PANEL POSITIONED OVER THEM**
